

3-Port Atmospherically Referenced

3-Port Atmospherically Referenced, Non-adjustable

Atmospherically vented counterbalance valves with pilot assist are meant to control an overrunning load. The check valve allows free flow from the directional valve (port 2) to the load (port 1) while a direct-acting, pilot-assisted relief valve controls flow from port 1 to port 2. Pilot assist at port 3 lowers the effective setting of the relief valve at a rate determined by the pilot ratio. Backpressure at port 2 does not affect the valve setting because the spring chamber is atmospherically referenced.

Other names for this valve include motion control valve and over-center valve.

## TECHNICAL DATA

NOTE: DATA MAY VARY BY CONFIGURATION. SEE CONFIGURATION SECTION.

|                                                         |                         |
|---------------------------------------------------------|-------------------------|
| Pilot Ratio                                             | 5:1                     |
| Maximum Recommended Load Pressure at Maximum Setting    | 320 bar                 |
| Maximum Setting                                         | 420 bar                 |
| Factory Pressure Settings Established at                | 30 cc/min.              |
| Maximum Valve Leakage at Reseat                         | 0,3 cc/min.             |
| Check Cracking Pressure                                 | 1,5 bar                 |
| Adjustment - No. of CCW Turns from Min. to Max. Setting | 5                       |
| Reseat                                                  | >85% of setting         |
| Locknut Hex Size                                        | 15 mm                   |
